

Part V - Counties

South Carolina is comprised of 46 counties, each with its own unique set of demographic, geographic, and political characteristics. These and other factors influence events within a county's borders. Using this information, planners can tailor specific countermeasures to the unique situation of a given county. Crime, economic activity, accidents and the subject of this book (traffic collisions) are all affected by these characteristics. On the following pages, a summary of each county's traffic collision characteristics is provided. Among other facts, this data shows the following for 2003:

- ◆ Charleston County had the most traffic collisions with 12,273. This total was just slightly more than the number two county, Greenville (11,105).
- ◆ Horry County had the most fatal collisions with 72 reported during the year, followed by Spartanburg with 47. Horry had the most traffic fatalities, with 75. Spartanburg was second, with 50 traffic fatalities.
- ◆ Charleston County had the most injury collisions and persons injured, with 3,593 and 5,486, respectively, in 2003. Richland County was next with 2,874 injury crashes and 4,447 injuries.
- ◆ The high number of collisions in Horry, Charleston and Richland Counties is largely a result of the large populations and larger amounts of travel within each of these counties.
- ◆ The counties with the highest collision and fatality rates were the rural counties. Jasper County, for example, had 27 traffic fatalities in 2003. It ranked fifteenth among the 46 counties in the number of fatalities. However, its population death rate was 128.6 per 100,000 population, making it by far the leading county in the state.
